Maheswaren Manivannan

Senior Backend Engineer with a focus on Java, Spring Boot and
Microservices

Berlin Metropolitan Area

Summary

I am currently working as a Senior Software Engineer, where I lead the backend development of a cloud-native rule engine platform for a major US healthcare product, Athena One. My core focus is designing scalable, high-availability backend solutions using Java, Spring Boot, and distributed microservices architectures, enabling systems to serve over 20,000 customers with 99.9% uptime. Throughout my 10+ years of experience, I've delivered high-performance applications using a robust tech stack that includes Java 17, Spring Boot, Kafka, PostgreSQL, Docker, Kubernetes (EKS), AWS (EC2, S3, IAM), and Terraform. I've also incorporated observability tools like Prometheus, Grafana, and ELK Stack to optimize performance and ensure system reliability. My hands-on experience with CI/CD pipelines (GitHub Actions, Jenkins) and security protocols (OAuth2, JWT, OpenID) helps drive secure, automated, and quality-focused releases. I've worked across cross-functional agile teams, consistently delivering high-quality, on-time results. Recognized for my proactive mindset and fast learning, I have received multiple "Exceeding Expectations" appraisals and am always eager to take on the next engineering challenge in a collaborative international environment.

Experience

AgileAxis Inc.

Senior Software Engineer

April 2022 - May 2026 (4 years 2 months)

Chennai

Leading backend development of a cloud-native rule engine platform built with Java and Spring Boot, scaling to 20,000+ customers while maintaining 99.9% service uptime.

Designed and implemented a distributed microservices architecture using Spring Boot and Spring Cloud, improving request throughput by 45%.

Built an event-driven processing pipeline using Apache Kafka, reducing claim processing latency by 40% and improving system reliability.

Implemented real-time monitoring with Prometheus and Grafana, cutting production incident response time by 35%.

Developed automated regression and performance testing framework using JUnit and Apache JMeter, maintaining 95%+ test coverage and reducing post-release defects by 30%.

AGILE AXIS

Senior Software Engineer

April 2022 - May 2025 (3 years 2 months)

Leading backend development of a cloud-native rule engine platform built with Java and Spring Boot, scaling to 20,000+ customers while maintaining 99.9% service uptime. Designed and implemented a distributed microservices architecture using Spring Boot and Spring Cloud, improving request throughput by 45%. Built an event-driven processing pipeline using Apache Kafka, reducing claim processing latency by 40% and improving system reliability. Implemented real-time monitoring with Prometheus and Grafana, cutting production incident response time by 35%. Developed automated regression and performance testing framework using JUnit and Apache JMeter, maintaining 95%+ test coverage and reducing post-release defects by 30%.

Cognizant

Senior Software Engineer

May 2019 - April 2022 (3 years)

Chennai

Maintained and enhanced a large-scale underwriting web application supporting thousands of daily credit decisions with 99.8% system availability.

Migrated centralised authentication and authorisation to a custom application-specific security module, improving security compliance and reducing unauthorised access incidents by 60%.

Delivered multiple business-critical features using Java, Spring Boot, and REST APIs, ensuring 100% on-time delivery across releases.

Independently deployed security-critical features to production, reducing dependency on external teams and accelerating release cycles by 25%.

3i Infotech Ltd.

Software Engineer

October 2015 - May 2019 (3 years 8 months)

Chennai

Migrated legacy desktop ERP modules to a modern web-based architecture, enabling 100% browser-based access and reducing operational overhead by 40%.

Led migration of the Real Estate module with a team of 3 developers, delivering the production release 2 weeks ahead of schedule.

Built backend services using Spring Framework and Hibernate, improving data consistency and reducing transaction failures by 30%.

Developed a standalone microservice to sync real estate unit availability with a third-party e-commerce platform, improving listing accuracy by 50%.

Education

Scaler

· (2021 - 2022)

Alpha College Of Engineering

Bachelor of Engineering, Computer Science · (2009 - 2014)
